experiment Focus group Meta-analysis Multivariate statistics Participant observation vte Percentage of trained teachers by region (2000–2017) Teacher education or teacher training refers to programs, policies, procedures, and provision designed to equip (prospective) teachers with the knowledge, attitudes, behaviors, approaches, methodologies
and skills they require to perform their tasks effectively in the classroom, school, and wider community. The professionals who engage in training the prospective teacher are called teacher educators (or, in some contexts, teacher training the professionals who engage in training the professional training training training the professional training trainin
term 'teacher training' (which may give the impression that the activity involves training staff to undertake relatively routine tasks) seems to be losing ground, at least in the U.S., to 'teacher education' (with its connotation of preparing staff for a professional role as a reflective practitioner). The two major components of teacher education are in-
service teacher education and pre-service teacher education for life, and the fact that education systems consume significant
financial resources. However, the degree of political control over Teacher Education varies what or how new teachers are taught; this can lead to anomalies, such as teachers being taught using teaching methods that would be deemed
inappropriate if they used the same methods in schools, or teachers being taught by persons with little or no hands-on experience of teaching in real classrooms. In other systems, teacher education may be the subject of detailed prescription (e.g. the state may specify the skills that all teachers must possess, or it may specify the content of teacher
education courses). Policy cooperation in the European Union has led to a broad description of the kinds of attributes that teachers in European Union member states should possess: the Common European Union member states should possess: the Common European Union has led to a broad description of the kinds of attributes that teachers in European Union member states should possess: the Common European Union has led to a broad description of the kinds of attributes that teachers in European Union member states should possess: the Common European Union has led to a broad description of the kinds of attributes that teachers in European Union member states should possess: the Common European Union has led to a broad description of the kinds of attributes that teachers in European Union has led to a broad description of the kinds of attributes that teachers in European Union has led to a broad description of the kinds of attributes that teachers in European Union has led to a broad description of the kinds of attributes that teachers in European Union has led to a broad description of the kinds of attributes that teachers in European Union has led to a broad description of the kinds of attributes that teachers in European Union has led to a broad description of the kinds of attributes that the European Union has led to a broad description of the kinds of attributes that the European Union has led to a broad description of the kinds of attributes that the European Union has led to a broad description of the kinds of attributes that the European Union has led to a broad description of the kinds of attributes that the European Union has led to a broad description of the kinds of attributes that the European Union has led to a broad description of the kinds of attributes that the European Union has led to a broad description of the European Union has led to a broad description of the European Union has led to a broad description of the European Union has led to a broad description of the European Union has led to a broad 
continuum, teacher education is often divided into these stages initial teacher training / education (a pre-service course before entering the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training and support during the classroom as a fully responsible teacher); induction (the process of providing training the classroom as a fully responsible teacher); induction (the process of providing training the classroom as a fully responsible teacher); induction (the process of providing training training the classroom as a fully responsible teacher); induction (the process of providing training traini
professional development (an in-service process for practicing teacher s). Initial Organization In many countries, Initial Teacher Education (also known as preservice teacher training) takes place largely or exclusively in institutions of higher education (also known as preservice teacher training) takes place largely or exclusively in institutions of higher education (also known as preservice teacher training) takes place largely or exclusively in institutions of higher education (also known as preservice teacher training) takes place largely or exclusively in institutions of higher education (also known as preservice teacher training) takes place largely or exclusively in institutions of higher education (also known as preservice teacher training) takes place largely or exclusively in institutions of higher education (also known as preservice teacher).
provide pre-service teacher training while Teacher Training Colleges provide in-service teacher training while Teacher training to two basic models. In the 'consecutive' model, a teacher first obtains a qualification in one or more subjects
(often a diploma in teaching or an undergraduate bachelor's degree), and then studies for a further period to gain an additional qualification in teaching (this may take the form of a post-baccalaureate credential or master's degree). In the alternative 'concurrent' model, a student simultaneously studies both one or more academic subjects, and the
ways of teaching that subject, leading to a combined bachelor's degree and teacher by working in a school under the responsibility of an accredited experienced practitioner. In the United
Kingdom there is a long tradition of partnerships between universities and schools in providing state supported teacher education. [3] This tradition is not without tensions and controversies. [4] In the United States, approximately one-third of new teacher education is not without tensions and controversies.
Feistritzer, the President of National Center for Alternative Certification and the National Center for Education Information, to a congressional subcommittee on May 17, 2007. However, many alternative pathways are affiliated with schools of education, where candidates still enroll in university-based coursework. A supplemental component of
university-based coursework is community-based teacher education, where teacher candidates immerse themselves in community-based teacher education also challenges teacher candidates immerse themselves in community-based teacher education, where teacher education also challenges teacher education also challenges
make an attitudinal change in the teacher trainees in order to eliminate segregation within the school community.[5] Curriculum The question of what knowledge, attitudes, behaviours, approaches, methodologies and skills teachers are entrusted with
the transmission to learners of society's beliefs, attitudes and deontology, as well as of information, advice and wisdom, and with facilitating learners' acquisition of the key knowledge, attitudes and behaviours that they will need to be active in society and the economy. Generally, Teacher Education curricula can be broken down into four major areas:
foundational knowledge in education-related aspects of philosophy of education, history of education, educatio
content-area and methods knowledge and skills—often also including ways of teaching and assessing a specific subject, in which case this area may overlap with the first ("foundational") area. There is increasing debate about this aspect; because it is no longer possible to know in advance what kinds of knowledge and skill pupils will need when they
enter adult life, it becomes harder to know what kinds of knowledge and skill teachers should have. Increasingly, emphasis is placed upon 'transversal' or 'horizontal' skills (such as 'learning to learn' or 'social competences'), which cut across traditional subject boundaries, and therefore call into question traditional ways of designing the Teacher
Education curriculum (and traditional school curricula and ways of working in the classroom), practice at classroom teaching or at some other form of field observations, student teaching, or (U.S.) internship (See Supervised Field
Experiences below). Rural Those training to teach in rural and remote areas face different challenges from those who aspire to each in rural and remote areas. It has been proposed that rural and remote communities may have more success
recruiting teachers who already live in these communities, rather than trying to recruit urbanites to move to rural communities once they have completed their teacher training.[9] Online and blended teacher education programs are becoming more prevalent to help meet the needs of teacher shortages in rural and remote areas.[10][11][12][13] In
addition, the United Nations Sustainable Development Goal 4 aims to substantially increase the supply of qualified teachers by 2030 through international cooperation. [14] Supervised field experiences field observations—include observations

countries like Sri Lanka. Courses, modules, and other activities are often organization makes the programs more rational or logical in structure. The conventional organization has sometimes also been criticized, however, as artificial and unrepresentative of how teachers
actually experience their work. Problems of practice frequently (perhaps usually) concern foundational issues, curriculum, and practical knowledge simultaneously, and separating them during teacher education may therefore not be helpful. However, the question of necessary training components is highly debated as continuing increases in attrition
rates by new teachers and struggling learners is evident.[15] Additionally, with the increasing demands of the "teacher" research is beginning to suggest that teachers must not only be trained to increase learning experiences for their students, but how to also be a leader in an increasingly challenging field.[16] The debate of how best to prepare
teachers for teaching in today's demanding environments will continue to be an important focus of the United States, where the education of all children successfully is priority. Induction of beginning teachers Teaching involves the use of a wide body of knowledge about the subject being taught, and another set of knowledge about the most effective
ways to teach that subject to different kinds of learner; it, therefore, requires teachers who either do not enter the profession after their first years in the profession after the profession after
teaching post, is high.[17] A distinction is sometimes made between inducting a teacher into a new school (explaining the school's vision, procedures etc.), and inducting a new teacher into the teaching profession (providing the support necessary to help the beginning teacher develop a professional identity, and to further develop the basic
competences that were acquired in college). A number of countries and states have put in place comprehensive systems of support to help beginning teacher of an experienced teacher, specifically trained as a
mentor; the mentor may provide emotional and professional support and guidance; in teacher training, induction is limited to the provision of a mentor, but research suggests that, in itself, it is not enough.[18] a peer network: for mutual support but also for peer learning. input from educational experts (e.g. to help the beginning teacher relate what
she learned in college with classroom reality). support for the process of self-reflection that all teachers engage in (e.g. through the keeping of a journal). Some research[19] suggests that such programmes can: increase the retention of beginning teachers in the profession; improve teaching performance; promote the teachers' personal and
professional well-being.[20] However, numerous authors [21][22] suggest that current teacher education is highly flawed and primarily geared towards a western dominated curriculum.[23] Hence, they suggest that teacher education is highly flawed and primarily geared towards a western dominated curriculum.
the requirements of their students. [21] This falls into the area of culturally responsive teaching and teachers to address issues of diversity education and teachers to address is address to address is address to addres
colour and diversity achieve and attain. Continuous Professional Development Because the world that teachers are preparing young people to enter is changing so rapidly, and because the teaching skills required are evolving likewise, no initial course of teacher education can be sufficient to prepare a teacher for a career of 30 or 40 years. In
addition, as the student body continuous pressionals) reflect upon their students.[25][26] Continuous pressional development is the process by which teachers (like other professionals) reflect upon their competencies, keep them up to
date, and develop them further. The extent to which education authorities support this process varies, as does the effective essional development activities should: be spread over time, be collaborative, use active learning, be delivered to
groups of teachers, include periods of practice, coaching, and follow-up, promote reflective practice, [27] encourage experimentation, and respond to teachers' needs. [28][29][30] However, a systematic review published in 2019 by the Campbell Collaboration, summarizing evidence from 51 studies, finds no clear evidence that continuing professional
development in education improves student academic outcomes.[31] Teacher training world has been covered by The Erasmus Programme and his platform, the SchoolEducationGateway; providing a unique opportunity to European teachers in international
training courses in different European countries, fully funded the KA1 (KeyAction1). [32] Quality assurance in teacher education This section by adding citations to reliable sources. Unsourced material may be challenged and removed. (January 2015) (Learn how and when to remove this
template message) The concept of 'Quality' in education is contested and understood in numerous different ways. Assuring the quality of teacher education programs who consistently show positive results, and offering registration, licensing, or
certification to those who demonstrate competency to enter the teaching profession.[33] It is sometimes taken to relate to the quality of the work undertaken by a teachers, which has significant effects upon his or her pupils or students. Further, those who pay teachers which has significant effects upon his or her pupils or students.
they are receiving value for money. Ways to measure the quality of work of individual teachers, of schools, or of education systems as a whole, are therefore often sought. In most countries, teacher salary is not related to the perceived quality of his or her work. Some, however, have systems to identify the 'best-performing' teachers, and increase their
remuneration accordingly. Elsewhere, assessments of teacher performance may be undertaken with a view to identify those teachers that should be required to leave the profession. In some countries, teachers are required to re-apply periodically for their
license to teach, and in so doing, to prove that they still have the requisite skills. But still there are countries (e.g. Sri Lanka) where teaching cannot be considered as a profession as the teachers are not provided with a license to teach. Feedback on the performance of teachers is integral to many state and private education procedures, but takes
many different forms. [34] The 'no fault' approach is believed by some to be satisfactory, as weaknesses are carefully identified, assessed and then addressed through the provision of in house or school based training. These can, however, be seen as benefiting the institution and not necessarily fully meeting the continuing professional development
needs of the individual as they lack educational gravitas. Teacher Educator Cocupation Names Teacher Educator Education Teacher Educator Education Teacher Educator Education Teacher Educator E

professional whose principle activity is the preparation of beginning teacher and other institutions of teacher education, such as National Colleges and Teacher Training Colleges and Teacher Centers. A broader definition might include any professional whose work contributes in some way to the initial education or the
continuing professional development of school and other teachers.[35] Even within a single education academics with a
responsibility for Teacher Education as such, for teaching a subject (such as chemistry or mathematics) to students who will later become teachers in schools who supervise student teachers during periods of teaching practice; school teachers or school managers responsible for
inducting new teachers during their first year of teaching; or those in charge of school teaching staff's continuous professional development. [37] Teacher educators may therefore work in many different contexts including National Colleges of Education, teacher training colleges, teacher centers, (universities, schools, private sector training
organisations or trade unions)[37] and their working time may be fully, or only partly, dedicated to the preparation of teachers requires different knowledge and skills than those required to teach pupils or students.[38] Teacher educators' fields of
knowledge Some recent research has highlighted the many fields of knowledge about: the pedagogy of teacher educators; these include knowledge about the specific contexts
 their students will work and working in (e.g. for primary, or secondary education) and the subjects they will teach. More experienced teacher education, the way it is organised, and in research.[39] Multiple identities The complexity of the tasks of the
teacher educator arises in part because, as research has shown, they have multiple professional identities. (This is linked to the education of teachers do self-identify as 'teacher educator', others may self-identify rather as 'researcher' or
'academic'; others may relate primarily to their academic discipline, such as 'chemist' or 'geographer.' [40] But the key duality of identity that lies at the core of the teacher educator must be a highly competent 'first-order educator' (i.e. a good teacher) but also a skilled
'second-order educator' (i.e. capable of teaching effectively about the skill of teaching and facilitating others to acquire teaching skills). As first-order educators, they require, in addition, specific competences and dispositions, such as modelling and meta-reflection,
that enable them to teach about teaching.[38] The acquisition or improvement of teacher competences requires training, through which it will be improved educational planning and assessment. This results in a better learning of students, as evidences show.[41] It is the objective of FAMT & L Comenius project, conducted at the University of
Bologna, designed with the aim of promoting the correct use of formative assessment in mathematics, starting from identifying their needs, believes, expectations and the use of formative assessment. [42] Modelling The
way in which teacher educators teach has a greater impact on student teachers' thinking about practice than what teacher educators teach. [43] So, teacher educators teach has a greater impact on student teacher educators teach has a greater impact on student teacher educators teach has a greater impact on student teacher educators teach.
educators need to develop the ability to link their own (tacit) theories and practice of teaching to public theory, i.e., in Korthagen's [46] words, to translate Theory with a small 't'. Meta-reflection Just as teaching is no longer seen as simply transferring factual information, so educating teachers also requires a more
sophisticated approach, based upon professional awareness[47] that comes from reflective practice.[48] For Loughran,[49] being a professional teacher educator requires "genuinely reflecting on, and responding to, the needs, demands, and expectations of teaching within the academy". Professional standards for teacher educators In
some parts of the world (notably the United States, Flanders and the Netherlands) specific standards of professional practice have been developed for, or by, teacher educators. These set out the range of competences that a member of the teacher educator profession is expected to be able to deploy, as well as the attitudes, values and behaviours that
are deemed to be acceptable for membership of the profession). [50] Policy and legislation on the teacher educator profession while schools and school teachers are often in the news and in political debate, research shows that the teacher educator profession is largely absent from such public discussions and from policy discourse in Education [51]
which often focuses exclusively on teachers and school leaders. Some research suggests that, while most countries have policies, and legislation, in place concerning the teacher educator profession. Caena (2012) [52] found that some of the consequences of this situation can
include a teacher educator profession that is poorly organised, has low status or low formal recognition, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection, induction, or continuing professional standards – or even minimum qualifications, and no coherent approach to the selection of the selection 
(NCTE) released the 'National Curricular Framework for Teacher Education, 2010 (NCFTE), which aims to remedy many of the agency and autonomy of the teacher, who can interpret the curriculum meaningfully to the contextual needs of
the learners, than merely focus on 'teaching the text book'. Research into the teacher educator profession has also been seen as under-researched; [53] empirical research on profession for the quality of teaching and learning has
been underlined by international bodies including the OECD and the European Commission.[55] Some writers have therefore identified a need for more research into "what teachers for the 21st century".[56] In
response to this perceived need, more research projects are now focusing on the teacher education Network Gender mainstreaming in teacher education policy Normal school Pedagogy School of education Teaching method
